

**BHARATHIAR UNIVERSITY, COIMBATORE-641 046
DEPARTMENT OF COMPUTER APPLICATIONS**

**M.Sc. DATA ANALYTICS 2020-2021 – (CBCS) University Dept.
(Effective from the academic Year 2020-2021)**

1. Eligibility for Admission

A pass in any Bachelors degree of minimum 3 years duration with Mathematics or Statistics as any one of the subjects at Graduate level.

2. Duration

The programme shall be offered on a full-time basis for two years. The programme will consist of three semesters of course work and laboratory work and the fourth semester consist of major project.

3. Regulations

The general Regulations of the Bharathiar University Choice Based Credit System Programme are applicable to these programmes.

4. The Medium of Instruction and Examinations

The medium of instruction and Examinations shall be in English.

5. Submission of Record Notebooks for Practical Examinations & Project Viva-Voce.

Candidates taking the Practical Examinations should submit bonafide Record Note Books prescribed for the Examinations. Otherwise the candidates will not be permitted to take the Practical Examinations. Candidates taking the Project Viva Examination should submit Project Report prescribed for the Examinations. Otherwise the candidates will not be permitted to take the Project Viva-voce Examination.

Students carry out Mini-project and major project and the schedule for project review meetings are as given below:

Table: Schedule for Project Review Meetings

	First Review	Second Review
Mini Project	Thursday of first week in June	Thursday of first week in August
Major Project	Friday of first week of February	Friday of first week of April

6. Ranking

A candidate who qualifies for the PG Degree Course passing all the Examinations in the first attempt, within the minimum period prescribed for the Course of Study from the date of admission to the Course and secures 1st or 2nd Class shall be eligible for ranking and such ranking will be confined to 10% of the total number of candidates qualified in that particular subject to a maximum of 10 ranks.

7. Revision of Regulations and Curriculum

The above Regulation and Scheme of Examinations will be in vogue without any change for a minimum period of three years from the date of approval of the Regulations. The University may revise/amend/ change the Regulations and Scheme of Examinations, if found necessary.

M.Sc. Data Analytics

Syllabus

(With effect from 2020- 2021)

DEPARTMENT OF COMPUTER APPLICATIONS

Bharathiar University

**(A State University, Accredited with “A“ Grade by NAAC and
13th Rank among Indian Universities by MHRD-NIRF)**

Coimbatore 641 046, INDIA

BHARATHIAR UNIVERSITY: COIMBATORE 641046

DEPARTMENT OF COMPUTER APPLICATIONS

MISSION

- To impart practical knowledge and professional skills in the area of computer applications to students to make them industry ready.
- To contribute to the advancement of knowledge in the field of Computer Applications through research.
- To involve the students in societal contributions to make them aware of the society and its needs.

BHARATHIAR UNIVERSITY, COIMBATORE-641 046
DEPARTMENT OF COMPUTER APPLICATIONS

M.Sc. DATA ANALYTICS

Program Educational Objectives (PEOs)	
The PEOs of M.Sc Data Analytics programme describe accomplishments that graduates are expected to attain within five to seven years after graduation	
PEO1	Apply terminologies and principles in problem solving adapting to applications of Mathematics, Statistics, Business and emerging computing technologies in the field of Data Analytics to conceptualize real world problems.
PEO2	Exhibit proficiency as data analytics professionals through latest technologies to business and organizations in demonstrating the ability for work efficacy
PEO3	Work and collaborate with interdisciplinary backgrounds as a part of team to address the contemporary issues with innovation
PEO4	Pursue entrepreneurship, research and higher studies associated with the program to function efficiently and effectively addressing challenging problems innovatively in the society
PEO5	Communicate effectively, recognize and incorporate societal needs and constraints in their professional endeavor
PEO6	Practice their profession as Data Analyst with high regard to ethical responsibilities.

BHARATHIAR UNIVERSITY:: COIMBATORE-641046
DEPARTMENT OF COMPUTER APPLICATIONS

M.Sc. DATA ANALYTICS

Program Specific Outcomes (PSOs)	
After the successful completion of M.Sc Data Analytics Programme, the students are expected to demonstrate	
PSO1	Knowledge on Data Analytics Principles and Components Data Acquisition, Data Transformations, Big Data Platforms for analysis and Interpretation
PSO2	Sound Knowledge of constructing data into meaningful structures by data curation and reporting to predict and gather valuable Data Insights
PSO3	Knowledge on using Statistics, Mathematics in designing Models and Algorithms for achieving Business Objectives
PSO4	Sound Knowledge on Data Analytics, Big Data Technology Tools, Visualization, Database Management, Machine Learning and Programming for Analytics of Large scale Data to support business processes and functions
PSO5	Apply data science methods in assessing data requirements and integrating data analytic problem framework for domain specific applications
PSO6	Communicate data assumptions, analysis and insights in written and visual dashboards and articulate as data story
PSO7	Knowledge on Professional and ethical responsibility on data ownership and data privacy

Program Outcomes (POs)	
On successful completion of the M. Sc. Data Analytics program	
PO1	Apply knowledge of mathematics, statistics, science and computing appropriately to model the software applications, configure software platform and analyze real time data in heterogeneous domains.
PO2	Design a system, component or process, tools to meet desired needs within realistic constraints such as economic, environmental, social, and ethical and safety contexts
PO3	Have an ability to design, implement, evaluate, analyze, interpret complex problems and data, provide sustainable computational solutions and synthesis of information to provide valid conclusion for domains of business, healthcare, environment,.
PO4	Create, Select and apply appropriate technologies, tools, techniques for data modeling, processing of complex problems and prediction for data analysis.
PO5	Communicate effectively with the computing community, and with society, about complex computing activities by being able to comprehend and write effective reports, design documentation, demographics and make effective presentations.
PO6	Manage projects and function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO7	Understand the impact of professional analytical solutions in societal and environmental contexts and apply the knowledge for benefit of individual for sustainable development.
PO8	Recognize the need for, and prepare them to engage in independent and life-long learning in the context of technological advancements for the betterment of individuals, organizations, research community and society.
PO9	Apply ethical principles, commit to professional ethics and responsibilities and human values.
PO10	Utilize the knowledge of education in understanding of data, management principles, computing solutions to apply on one's own work, as a member and leader in a team to manage project in multidisciplinary environments and societal contexts.

BHARATHIAR UNIVERSITY :: COIMBATORE 641 046**M.Sc. Data Analytics Curriculum (University Department)***(For the students admitted during the academic year 2020 – 21 onwards)***SCHEME OF EXAMINATIONS**

Course code	21CSEGC01	PRINCIPLES OF DATA SCIENCE	L	T	P	C
Core/Elective/Supportive	Core		4	4	0	4
Pre-requisite	Basica of Data and Data types		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand Data source evolution, data Characteristics and data processing models. 2. To understand and apply data processing architecture ,Eco System Components of Big Data Frameworks HADOOP, SPARK MapReduce 3. To analyze and Build Data Science use cases for specific domain and applications. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand Data sources, generations, data formats, Data Evolution, Data from various domains					K1, K2
2	Understand Big Data Characteristics What, Why, When, Limitation of traditional approaches and models. Map Big Vs to Data Domains					K3
3	Understand Big Data Processing platform , frameworks , Hadoop, Spark , storage models – Hbase- Programming Model of Big Data MapReduce, Why MapReduce, Limitations of Traditional Models					K2
4	Understand the Role of Big Data and Artificial Intelligence – Ethics – AI Applications					K2-K5
5	Analyze various domains of Big Data Characteristics, Platform, Programming Model and Design Big Data framework ecosystem, and data processing framework of domains of Marketing, Health Care and Supply Chain					K4-K5 K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction to Data Evolution & Sources				12-- hours	
Big Data in Industry 4.0 - Data Evolution: Data Development Time Line – ICT Advancement-a Perspective – Data Growth-a Perspective – IT Components-Business Process – Landscape-Data to Data Science – Understanding data: Introduction – Type of Data: Numeric – Categorical – Graphical – High Dimensional Data — Data Classification --Data Formats: Structured, Semi-Structured and Un-Structured – Data Sources : Time Series – Transactional Data – Biological Data – Spatial Data – Social Network - Data Science: Data Science-A Discipline – Data Science vs. Statistics – Mathematics - Programming Language - Database, - Machine Learning. Data Analytics Relation: Data Science, Analytics, Big Data Analytics. .						
Unit:2	Big Data Towards Data Science				12-- hours	

<p>Big Data: Introduction To Big Data: - Evolution – Data as Economy - What is Big Data – Sources of Big Data. – Big Data Myths - Characteristics of Big Data 6Vs – Big Data Use cases - Big data- Challenges of Conventional Systems- -- Data Processing Models – Limitation of Conventional Data Processing Approaches - Data Discovery-Traditional Approach, Big Data Technology: Big Data Exploration - Data Augmentation – Operational Analysis – 360 View of Customers – Security and Intelligence – Data Analytics – Classification - Descriptive – Diagnostic - Predictive – Prescriptive – Augmented – Pervasive Analytics- Data Science Components: Data Engineering, Data Analytics-Methods and Algorithm, Data Visualization – P’s of Data Science – Process – People – Platform</p>		
Unit:3	Big Data Framework and Components	12-- hours
<p>Big Data Technologies - Hadoop: Basic Concepts-An Overview of Hadoop-The Hadoop Distributed File System-Anatomy of a Hadoop Cluster-Hadoop Ecosystem Components. SPARK – in Architecture – SPARK Advantages - HBASE: HBase Architecture-HBase API-Managing large data sets with HBase - Map Reduce Framework Phases - Map Reduce Input and Output Formats - Advanced Concepts - Sample Applications – Combiner – Joining datasets in Map reduce jobs – Map - side join – Reduce - Side join - Map reduce – customization</p>		
Unit:4	Big Data and AI : Roles and Skills	12-- hours
<p>AI: Cognitive Computing : Learning Perceptions – Terminologies - Machine Learning – Neural Networks – Deep Learning - NLP – Speech Processing – Big Data and AI – Ethics in AI Research - Advanced Applications – AI Myths – Data Science Roles Data Scientist , Data Architect, Data Analyst – Machine Learning Engineer - Skills</p>		
Unit:5	Data Science Use cases	12-- hours
<p>Data Science & Big Data Use cases Specifications and Discussion – Data Sources Identification – Data Types –Data Classification – Data Characteristics of Big V’s – Data Science P’s – Big Data Frameworks – Data Analytics Classification – Applications of AI: Domains : Customer Insights – Behavioral Analysis -- Marketing – Retails – Insurance – Risk and Security –Health care – Supply Chain Logistics</p>		
Unit:6	Contemporary Issues	2 hours
<p>Addressing Controversy Views of social media – Big Data Source – Data Science Technology - Animal Testing : Technological Solution – Human Rights and Data Expert lectures, online seminars – webinars</p>		
	Total Lecture hours	62-- hours

Core/Elective/Supportive	Core		4	4	0	4
Pre-requisite	Basics of Mathematics and Statistics		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
1. To understand the Probability Theory						
2. To understand theoretical distributions and automata theory						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To understand the principles of probability, frequency distribution measures					K2
2	To understand the correlation and regression, hypothesis test, sampling techniques for specific applications					K3
3	To apply probabilistic models and distribution models					K3
4	To apply hypothesis testing and regression models for specific domain					K4
5	To design statistical models for specific domains and illustrate statistical methods					K5, K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction to Set Theory					12-- hours
Set Theory: Basic set operations, relations and functions, transitive closure relation, principle of mathematical induction. Matrices: Properties of determinants, inverse of a matrix, Eigen values and Cayley Hamilton theorem.						
Unit:2	Probability Theory					12-- hours
Introduction to Probability Theory: Sample space and events, axioms of Probability, conditional probability, Bayer's theorem, independence of events.						
Unit:3	Descriptive Statistics					12-- hours
Basic probability theory - distributions and their properties - Frequency Distribution - Continuous or Grouped Frequency Distribution - Magnitude of Class intervals - Cumulative Frequency Distribution - Two Way Frequency Distribution - Measures of Central Tendency: Arithmetic Mean, Geometric Mean - Harmonic Mean - Median, Mode - Dispersion: Overview - Mean Deviation - Standard Deviation - Combined Standard Deviation.						
Unit:4	Theoretical Distribution					12-- hours
Theoretical Distribution: Binominal Distribution - Obtaining Coefficient - Poison Distribution - Normal Distribution - Poisson - Cumulative Poisson Process and its generalization - applications in different business domain - ARMA and ARIMA - Monte Carlo Simulations						
Unit:5	Automata Theory: NDFSA and NDFSA					12-- hours

Introduction to Automata Theory: Introduction - Finite State Automata – Deterministic Finite State Automata - Non-Deterministic Finite State Automata, NDFSA with E - Transitions, Moore and Mealy Machines, Regular Expressions.			
Unit:6	Contemporary Issues		2 hours
Application of data analytics in different domains – Exploring Case Studies for the topics given in Unit 1 to Unit 5.			
Total Lecture hours			62-- hours

Core/Elective/Supportive	Core		4	2	2	4
Pre-requisite	Knowledge on data, data types		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> To understand the object oriented concepts: Class, Inheritance and Polymorphism. To understand and analysis concepts of Algorithmic analysis and algorithm approaches. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Develop and understand on data structures, the information arranged in memory of computer, information manipulation with the use of algorithms in a data structure.				K1, K2	
2	Formulate general principles with notations, to increase the computation time and size, search nodes to find the depth root of a tree.				K3	
3	Identify classes and objects from the given problem description and create classes and objects using C++, Code reusability and extensibility by means of Inheritance and Polymorphism				K2,K5	
4	Design algorithms for problem solving by using the suitable algorithmic technique				K2,K3	
5	Analyze a given algorithm for its efficiency based on time and space it occupies and optimization techniques for improving the performance of algorithms.				K4,K5, K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Introduction to Data Structures				18-- hours	
Stacks – Push and Pop – Stack frames for Sub Programmes – Queues – Tree – Graphs – Directed Graphs – Graph Traversal – List representation – Linked list – File organization – Sorting Algorithms and efficiency considerations - Searching						
Unit:2	Algorithmic Case Analysis				18-- hours	
Asymptotic Notations: Big Oh notation – O – Omega notation – Theta notation – Average case analysis – Binary tree – Recursion – Towers of Hanoi – Non Recursive Quicksort – Non Deterministic Algorithms.						

Unit:3	Object Oriented Language	18-- hours
Object oriented language fundamentals – programming basics – Conditional statements – Structures – Functions - Objects and Classes – Constructors – Overloading. Inheritance – Hierarchy - Derived class – Access specification - Polymorphism – virtual functions – virtual class – Files - Exception Handling.		
Unit:4	Design of Algorithms	18-- hours
Introduction to algorithms, Analyzing algorithms. Divide and Conquer: General Method, Binary Search, Merge sort, Quick sort. Greedy Method: Knapsack problem, Job sequencing with deadlines, Minimum spanning trees, Single source shortest paths.		
Unit:5	Dynamic Programming	18-- hours
Dynamic Programming: Multistage graphs, All pair’s shortest paths, Travelling salesperson problem. Back Tracking: 8-queens problem, Sum of subsets, Graph coloring, Hamiltonian cycles. Branch and Bound: General method, Travelling salesperson problem.		
Unit:6	Contemporary Issues	2 hours
1. Document classification – Key word identification – Higher level heuristics 2. Big Data – Contemporary applications – parallel algorithms –Architectures 3. Processor – Communication – Predicted complexity – CPU/GPU cycles – Sequential algorithms – optimization tools.		
Total Lecture hours		92-- hours

Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> To understand the basics of communication skills To Understand the logical skills To develop interpersonal skills To improve the writing skills To acquired knowledge in technical programming To acquired knowledge in technical programming and quantitative aptitude 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Develop the basics of communication skills and Develop confidence, clarity, fluency through active involvement				K2	
2	Increase logical skills, analytical skills and apply in software applications				K2	
3	Develop interpersonal skills, listening through (seminar, self intro, stage speaking)				K3	
4	Improve writing skills through various modes (letter writing, resume writing)				K3	
5	Practice technical programming, cracking code, simple logic and concepts				K1/K4	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create						
Unit:1	Introduction to Communication				18 hours	
Importance – Basics of Communication – Purpose and Audience - Language as a Tool of Communication – Communicative Skills - Modes of Communication – Active Listening-Introduction - Traits of a Good Listener – Listening Modes – Effective Speaking: Achieving Confidence, Clarity and Fluency – Paralinguistic Features – Types of Speaking						
Unit:2	Personality Development				18 hours	
A Must for Leadership and Career Growth – Swami Vivekananda Concept of Personality Development – Interpersonal Skills -Soft Skills: Introduction to Soft Skills – Classification of Soft Skills-Case study: Resume Writing-Email-letter Writing-Self Introduction.						
Unit:3	Technical programming skill				18 hours	
Variables and keywords - Operators in C – Decision Making– Looping - Branching Statements – Array – Functions.						
Unit:4	Quantitative Aptitude1				18 hours	
Number series -Ratio, Proportion and Partnership – Problems on Ages - Average - Profit and Loss.						

Unit:5	Quantitative Aptitude 2							18 hours		
Simple Interest – Compound Interest – Time and Work – Time and Distance.										
Unit:6	Contemporary Issues							2 hours		
Write an assignment on any one of the following: 1. Traits needed for a software Engineer. 2. Traits needed for a software project Manager. 3. Traits needed for a Teacher (Software Tester).

The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand the concepts of DBMS, Data Model and Normal forms. 2. To understand the concepts of concurrency control and Recovery. 3. To understand basics of SQL and NoSQL databases. 4. To understand and apply MongoDB (NoSQL) for Data Analysis using CURD and User Management. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the structure and model of the relational database management systems.					K2
2	Understand the concepts of transaction management and SQL, NoSQL database models					K3
3	Understand and create database models using MongoDB					K4
4	Apply MongoDB operators to retrieve data from document data stores					K3
5	Understand and apply concepts of data management indexing techniques for specific applications					K5, K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Database Overview				18 hours	
Introduction - Database concepts, Basic components of DBMS, sources of data - data models – hierarchical – network – XML and Stores - Relational Database Design: Anomalies in a Database– Functional Dependency – Lossless Join and Dependency – Preserving Decomposition – Third Normal Form– Boyce Codd Normal Form – Multivalued Dependency – Fourth Normal Form – Join Dependency – Project Join Normal Form –Domain Key Normal Form - SQL: Data Definition – Data Manipulation – Integrity Constraints–Views–PL/SQL.						
Unit:2	NoSQL				18 hours	
Indexing and Hashing – Query Processing – Transaction Processing – Concurrency Control and Recovery - Advanced Database Concepts and Emerging Applications: Distributed Databases – Object Oriented Databases - Object Relational Databases- Data mining and Data Warehousing – Big Data - Big Databases- SQL–NoSQL Tradeoffs–CAP Theorem–Eventual Consistency - NoSQL–database types – Document Oriented – Columnar – Graph – Key Value Pair - NoSQL database, design for performance / quality parameters, documents and information retrieval.						

Unit:3	MongoDB Introduction	18 hours
MongoDB- Introduction - MongoDb – Need – MongoDBVs RDBMS – MongoDB- Driver Installation – Configuration – Import and Export – MongoDB Server Configuration - Data Extraction Fundamentals - Intro to Tabular Formats - Parsing CSV -Parsing XLS with XLRD- Parsing XML - Intro to JSON - Getting Data into MongoDB - MongoDB- CURD – Database Creation – Update – Read – Delete.		
Unit:4	MongoDB Operators	18 hours
Using mongoimport -Operators like \$gt, \$lt, \$exists, \$regex -Querying Arrays and using \$in and \$all Operators -Changing entries: \$update, \$set, \$unset - Data Analysis - Field Queries -Projection Queries- Limiting – Sorting - Aggregation - Examples of Aggregation Framework -The Aggregation Pipeline - Aggregation Operators: \$match, \$project, \$unwind, \$group.		
Unit:5	Advanced MongoDB	18 hours
User Management – MongoDb Data Replication in Servers – Data Sharding – MongoDB Indexes – Create – Find – Drop – Backup – MongoDB – Relationships – Analyzing Queries – MongoDBObjectid – Advanced MongoDB:MapReduce – MongoDB - Text Processing - Regular Expression – Case Studies – Text processing of large datasets, Map Reduce using MongoDB		
Unit:6	Contemporary Issues	2 hours
Data Security – Performance – Data Safety – Resource Utility – High Availability.		
Expert lectures, online seminars – webinars		
		Total Lecture hours
		92-- hours

Core/Elective/Supportive		Core	4	4	0	4
Pre-requisite		Basic Mathematics	Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand linear programming methods. 2. To understand Dynamic programming approach. 3. To understand concepts basics concepts of Linear Algebra 4. To understand concepts of vector spaces and matrices 5. To understand the applications of Linear Algebra in Machine Learning 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Solve linear programming techniques to optimization problems arising in all Computer fields					K3
2	Use Dynamic programming approach to real time problems.					K3
3	Understand the basics of Linear Programming constructs					K2
4	Apply vector spaces and their applications in Machine Learning					K3
5	Understand the concepts of matrix, Gaussian Elimination and differential equations and Apply the concepts of Linear Algebra in Machine Learning Algorithms					K2, K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1 Linear Programming Problem 12 hours						
Introduction to Operations Research: Basics definition - scope – objectives - phases - models - limitations of Operations Research - Linear Programming Problem - Formulation of LPP - Graphical solution of LPP - Simplex Method - Artificial variables - Big-M method - Two-phase method - Degeneracy - Unbound solutions – Duality in Linear Programming Problems – Dual Simplex - Introduction to optimization - gradient descent method - convex optimization.						
Unit:2 Dynamic Programming 12 hours						
Introduction - Characteristics of dynamic programming – Dynamic programming approach for Priority Management employment smoothening – capital budgeting – Stage Coach/Shortest Path – cargo loading and Reliability problems.						
Unit:3 Geometry Linear Equations and Vector Spaces 12 hours						

The Geometry of Linear Equations - An Example of Gaussian Elimination- Matrix Notation and Matrix Multiplication - Triangular Factors and Row Exchanges- Inverses and Transposes. Vector Spaces and Subspaces – Solving $Ax=0$ and $Ax=b$ - Linear Independence, Basis and Dimension- The Four Fundamental Subspaces- Graphs and Networks- Linear Transformations.			
Unit:4		Determinants, Eigenvalues and Eigenvectors	12 hours
Determinants: Introduction- Properties of the Determinant- Formulas for the Determinant – Applications of Determinants. Eigenvalues and Eigenvectors: Introduction- Diagonalization of a Matrix .- Difference Equations and Powers A^k - Differential Equations and e^{At} - Complex Matrices- Similarity Transformations – A - Applications of Machine Learning – Use cases.			
Unit:5		Positive Definite Matrices	12 hours
Minima, Maxima, and Saddle Points - Tests for Positive Definiteness - Singular Value Decomposition – Machine Learning Applications – Use cases.			
Unit:6		Contemporary Issues	2 hours
Use Linear and Dynamic programming approach to real time problems. Apply the concepts of Linear Algebra in Machine Learning Algorithms Expert lectures, online seminars – webinars			
		Total Lecture hours	62 hours

Course code	21CSEGC07	DATA ANALYTICS With R			L	T	P	C
Core/Elective/Supportive		Core	4	2	2	4		
Pre-requisite		Knowledge on Data, Statistical Methods for Analysis	Syllabus Version		2020-2021			
Course Objectives:								
<ol style="list-style-type: none"> 1. To understand the basics constructs of R Programming Constructs and Visualization. 2. To understand and apply Exploring variables using Visualization. 3. To understand and apply Exploratory Data Analytics using Data Visualization 4. To understand and apply Inferential Statistics and Regression Models. 								
Expected Course Outcomes:								
On the successful completion of the course, student will be able to:								
1	Understand the basic programming structure of R– Data frame, Matrix, List, Packages and Functions					K1, K2		
2	Understand various visualization models and gather insights and inference of the datasets					K2 K3		
3	Apply statistical functions, Central tendency measure, Range, Variance, Standard Deviation to perform Diagnostic Analytics					K2, K3		
4	Understand data distribution of data and perform Regression and Annova to predict the insights					K3,K4		
5	Evaluate data set and perform EDA and Inferential Analytics to gather insights and design Models					K5 ,K6		
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create								
Unit:1		R Basics			18-- hours			
Introduction:What is R–Downloading and Installing R–. Getting Data into R: First Step in R:Typing in Small Datasets – Concatenating Data with c Function – Combining Variables with the c, cbind, rbind Functions - Vector Function –Matrix - Ddata frame – List - Importing Excel Data – Accessing Data from other Statistical Packages – Accessing the Database. Functions - The Attach Function – Exporting Data - The Tapply Function – The Supply and Lapply Function – The Summary and Table Function. Importing Data – Csv, Excel, Table, Xml, Json , Databases Conditional – Control flow – Loops– A Function with Multiple Arguments -								
Unit:2		Exploratory Data Analytics : Visualization Packages			18-- hours			
Cleaning Data : – Exploring raw data –Missing values - Zeros and NAs – Separating – Uniting Columns - String Manipulation – Filling Missing values – Packages – R Visualization Packages – Lattice – ggplot2 –Plotly , seaborn- understanding plots – aesthetics - - statistical function - Histogram – Box Plot – Density Plot – Scatter Plots The Plot Function –Adding a Smoothing Line The Pie Chart – The Bar and Strip Chart – Box Plot – Cleveland Dotplots- Reporting– Data Preparation – Embedding R chunks – Labelling and reusing code chunks – Report Compiling – Configuring – R Packages – shiny –Flex - ggvis -								

Unit:3	Visualization: Univariate and Multivariate Analysis	18-- hours
Variable Analysis – One variable – Understanding outliers through – histogram , boxplot, density plot – dataset – pseudo dataset of facebook Exploring two variables – Understanding Variables and relationships – scatter plots – correlations – condition means – Explore multivariate variables – Visualization of variables using aesthetics in R – Case study – Explore Diamond dataset for prize prediction		
Unit:4	Categorical and Numerical Data Insights & Inferences	18-- hours
Data types – Categorical – Binary – ordinal – Nominal – Continuous – Discrete – Data Dimensions – Univariate – bivariate – multivariate – Numerical Measures – Central Tendency – Mean – Median – Mode - Understanding data using central tendency – plotting histogram – density plots and inference of plot - Variability Measure – Variance - Range - IQC - and Standard Deviation – Sum of squares – Squared Deviations – Absolute Deviations - Identify outlier using Inter Quartile Range – Visualization using boxplot		
Unit:5	Data Distribution and Error	18-- hours
Data standardizing – Z Score – Negative Z Score – Continuous Distributions - Compute proportions – Relative Frequency histogram - Normalized Distribution using - Ztable – Probability Distributions - Probability of mean – location of mean distribution - Sampling Distributions — Klout Sampling Distribution – Understanding Shape of Distribution – Standard Error - Standard Deviation of sampling distribution – Ratio of Sampling Distribution - Central Limit Theorem R – Mean of sample means Advanced Analytics Regression Analysis – Simple Regression Analysis - – Logistic Regression – Multiple Regression ANNOVA Model – Parametric test - Non Parametric Test		
Unit:6	Contemporary Issues	2 hours
Analyze Global Datasets to understand Issues on Climate Change, Epidemic and Pandemic Outburst		
	Total Lecture hours	92-- hours

Course Code	21CSEGC08	DATA VISUALIZATION	L	T	P	C
Core/Elective/Supportive	Core		4	2	2	4
Pre-requisite	Knowledge on Data, Graphs and plots	Syllabus Version	2020-2021			
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand how accurately represent voluminous complex data set in web and from other data sources. 2. To understand the methodologies used to visualize large data sets 3. To know how to work with visualization tools. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the concepts of visualization					K2
2	Understand the methods for visualizing data in D3j, c3j, and Tableau					K1, K2
3	Apply Visualization methods for different data domains					K4
4	Design Interactive Charts based on Data					K3
5	Distinguish and Suggest the appropriate data visualization tools for domain specific applications and Design an Interactive data visualization story board for data					K4, K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction to Data Visualization					18 hours
Definition – Methodology – Seven Stages of Data Visualization - Data Visualization Tools. Visualizing Data: Mapping Data onto Aesthetics – Visualizing Amounts - Visualizing Distributions: Histograms and Density Plots – Visualizing Propositions: – Visualizing Associations: Among Two or More Quantitative Variables – Visualizing Time Series and Other Functions of an Independent Variable – Trends – Visualizing Geospatial Data.						
Unit:2	Interactive Data Visualization					18 hours
Introduction to D3 - Fundamental Technology: The Web – HTML – DOM – CSS – JavaScript – SVG. D3 Setup – Generating Page Elements – Binding Data - Drawing with data – Scales: Domains and Ranges – Normalization – Creating a Scale – Scaling the Scatter Plot – Other Methods and Other Scales. Axes – Modernizing the Chart – Update the Data – Transition – Updates – Interactivity.						
Unit:3	D3 Based Reusable Chart Library					18 hours
Setup and Deployment – Generate Chart – Customize Chart: Additional Axis – Show Axis Label –						

Change Chart Type – Format Values – Size – Color – Padding –Tooltip. Use APIs: Load and Unload – Show and Hide – Focus – Transform – Groups – Grid – Regions – Flow – Revert – Toggle –Legend – Sub chart – Zoom – Resize. Customize Style. Building Real time and Live Updating animated graphs with C3.		
Unit:4	Tableau Introduction	18 hours
Environment Setup – Navigation – File & Data Types. TA SOURCE: Custom Data View – Extracting Data – Fields Operations – Editing Meta Data – Data Joining – Data Blending. Worksheets.		
Unit:5	Basic and Advanced Charts in Tableau	18 hours
Bar Chart – Line Chart – Pie Chart – Scatter Plot – Bubble Chart –Gantt Chart – Histograms - Waterfall Charts. Dashboard – Formatting – Forecasting – Trend Lines.		
Unit:6	Contemporary Issues	2 hours
Apply Visualization methods for different domains. Design an Interactive data visualization story board for real time data		
Expert lectures, online seminars - webinars		
Total Lecture hours		92 hours

Course code	20CSEGC09	VIRTUALIZATION AND CLOUD	L	T	P	C
Core/Elective/Supportive	Core		4	4	0	4
Pre-requisite	Basic knowledge of data storage, Client – Server systems		Syllabus Version		2020- 2021	
Course Objectives:						
The main objectives of this course are:						
1. To impart knowledge on the concepts of distributed systems, cloud computing and AWS						
2. To gain knowledge over various virtualization and virtual machines						
3. To gain understanding about the data centers						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
CO1	To learn the fundamentals of distributed systems				K2	
CO2	To understand and use the cloud services and AWS				K3	
CO3	To understand and perform virtualization				K3, K6	
CO4	To create, configure and manage virtual machines				K4	
CO5	To learn about data center				K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Distributed Systems				12 hours	
Introduction to distributed systems - Distributed algorithm - Distributed Data Stores - Distributed Computing - File Systems - Distributed Messaging - Distributed Applications – Distributed Transaction - Parallel and distributed computing - Applications.						
Unit:2	Cloud Computing				12 hours	
Cloud Concepts: Introduction Cloud Computing - Advantages of Cloud - Public Cloud - five essential characteristics - three service models - Four deployment models - Benefits of Cloud Computing - Cloud Vendors - Traditional Infrastructure setup and Challenges – AWS.						
Unit:3	Virtualization				12 hours	
Virtualization: Introduction to vSphere and the Software - Defined Data Center - Creating Virtual Machines - VCenter Server - Configuring and Managing - Virtual Networks - Configuring and Managing Virtual Storage - Virtual Machine Management - Resource Management and Monitoring.						
Unit:4	Virtual Machines				12 hours	
Virtual Machines: vSphere HA - vSphere Fault Tolerance - Protecting Data vSphere DRS - Network Scalability - vSphere Update Manager and Host Maintenance - Storage Scalability - Securing Virtual Machines.						

Unit:5	Data centre	12 hours								
Data centre: Data centre overview -Components - Provisions - Need of Data Centre - Data Centre Architecture - Different Racks - Data center architecture for cloud computing - role of data centre in cloud computing.										
Unit:6	Contemporary Issues	2 hours								
Expert lectures, online seminars – webinars

Course code	21CSEGC10	BIG DATA FRAMEWORKS AND TOOLS	L	T	P	C
Core/Elective/Supportive	Core		4	2	2	4
Pre-requisite	Basics of Programming		Syllabus Version		2020-2021	
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand MapReduce programming architecture, processing models. 2. To understand and design MapReduce Programming using PIG and Hive 3. To understand and compare the architectural and processing of MapReduce Programming languages Pig, Hive and SPARK 						
Expected Course Outcomes:						
1	Understand distributed, MapReduce Processing architectures		K2			
2	Configure and setup MapReduce Processing architectures Ecosystem – Hadoop, Spark , Pig and Hive		K1, K2			
3	Understand and write MapReduce program using Pig and Hive, SPARK		K3			
4	Critically Analyze dataset using Pig , Hive and SPARK and suggest MapReduce Programming models based on domains specific applications		K3			
5	Design and setup a Big Data Analytics Ecosystem for specific Business scenarios.		K4 , K5, K6			
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Big Data Framework		18-- hours			
Introduction to Big Data – Distributed file system –,Hadoop Storage [HDFS], Common Hadoop Shell commands - Anatomy of File Write and Read, NameNode, Secondary NameNode, and DataNode - Map Reduce Architecture -Hadoop Configuration: Environment : Steps – Hadoop 1.0 Version VsHadoop 2.0 YARN – Setting up Hadoop Eco System – Oozie – FLUME- STORM – FLUME - Pig Configuration – Hive Configuration - SPARK Configuration – Integration – Hadoop with R – Hadoop with Python						
Unit:2	PIG : MapReduce		18-- hours			
Pig Introduction: Overview of Pig - Pig Architecture - Pig Execution modes, Pig Grunt shell and Shell - commands. Pig Latin Basis: Data model, Data Types, Operator - Pig Latin Commands - Load & Store, Diagnostic Operators, Grouping, Cogroup, Joining, Filtering, Sorting, Splitting - Built-In Functions, User define functions.- Pig Execution Modes – Batch Mode – Embedded Mode – Pig Execution in Batch Mode – Embedding Pig in Python – Use cases - Map Reduce programs with Pig – Pig Vs SQL						
Unit:3	Hive: Map Reduce - CURD		18-- hours			
Introduction of Hive - Hive Features - Hive architecture -Hive Meta store - Hive data types – Hive Tables - Table types - Creating database , Altering database, Create table, alter table, Drop table, - Built-In Functions - Built-In Operators, User defined functions –						
Unit:4	Hive: Aggregation and Indexing		18-- hours			
Hive QL–Introduction to Hive QL, Hive QL Select, Hive QL – MapReduce using Hive QL OrderBy,						

Group By Joins, LIMIT, Distribute By , Cluster By - Sorting And Aggregation – Partitioning – Static – Dynamic – Index Creation - Bucketing – Analysis of MapReduce execution – Hive Optimization – Setting Hiving Parameters. – Use case :MapReduce using Hive QL – Hive QLVs SQL			
Unit:5	SPARK Query	18-- hours	
SPARK – MapReduce - RDD Transformations – SPARK Operations – Usecase with SPARK and Comparison - MapReduce – Python – R – Pig – Spark – Hadoop - Limitations – Advantage – SPARK vs Hadoop – SPARK Vs Pig and Hive – MapReduce- Spark Transformations			
Unit:6	Contemporary Issues	2 hours	
Data Processing Architectures Issues – Scalability - Case Study on Industrial Reports			
		Total Lecture hours	92-- hours

Course code	21CSEGC11	MACHINE LEARNING	L	T	P	C
Core/Elective/Supportive	Core		4	2	2	4
Pre-requisite	Basics on Statistics and Linear Algebra		Syllabus Version	2020-2021		
Course Objectives:						
<ol style="list-style-type: none"> To understand the Concepts of Machine learning algorithms of different probabilistic, rE To apply the machine learning algorithms for various applications. 						
Expected Course Outcomes:						
CO1	Understand the concepts of machine learning		K1			
CO2	Understand the theoretical concepts of probabilistic and linear methods		K2			
CO3	Understand and distinguish Supervised, Unsupervised and semi supervised learning		K2			
CO4	Apply Supervised, Unsupervised and semi supervised algorithms for a specific problem		K4			
CO5	Design a Machine Learning models to predict in domain specific applications		K4, K3 ,K5			
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create						
Unit:1	Unsupervised Models		18-- hours			
Introduction : Machine Learning - Machine Learning Foundations –Overview – applications - Types of machine learning - basic concepts in machine learning Examples of Machine Learning - Applications - -Unsupervised Learning Clustering- K-means - EM - Mixtures of Gaussians - The EM Algorithm in General -Model selection for latent variable models - high-dimensional spaces -- The Curse of Dimensionality -Dimensionality Reduction - Factor analysis - Principal Component Analysis - Probabilistic PCA- Independent components analysis						
Unit:2	Linear Models		18-- hours			
Supervised Learning Linear Models for Regression - Linear Basis Function Models - The Bias-Variance Decomposition - Bayesian Linear Regression - Bayesian Model Comparison Linear Models for Classification - Discriminant Functions -Probabilistic Generative Models - Probabilistic Discriminative Models - Bayesian Logistic Regression. Decision Trees - Classification Trees- Regression Trees - Pruning. Support Vector Machines - Ensemble methods- Bagging- Boosting – Evaluation Methods						
Unit:3	Graphical Models		18-- hours			
Probabilistic Graphical Models Directed Graphical Models - Bayesian Networks - Exploiting Independence Properties - From Distributions to Graphs -Examples -Markov Random Fields - Inference in Graphical Models - Learning –Naive Bayes classifiers-Markov Models – Hidden Markov Models – decoding states from observations, learning HMM parameters-Inference – Learning Generalization – Undirected graphical models- Markov random fields- Conditional independence properties - Parameterization of MRFs - Examples - Learning - Conditional random fields (CRFs) - Structural SVMs						
Unit:4	Advanced Models		18-- hours			

Advanced Learning Sampling – Basic sampling methods – Monte Carlo. Reinforcement Learning- K-Armed Bandit Elements - Model-Based Learning- Value Iteration- Policy Iteration. Temporal Difference Learning Exploration Strategies- Deterministic and Non-deterministic Rewards and Actions- Eligibility Traces - Generalization- Partially Observable States- The Setting- Example. Semi - Supervised Learning. Computational Learning Theory - Mistake bound analysis, sample complexity analysis,			
Unit:5	Deep Learning Models	18-- hours	
Neural Networks -Feed-forward Network Functions - Error Back propagation - Regularization - Mixture Density and Bayesian Neural Networks - Kernel Methods - Dual Representations - Radial Basis Function Networks – Sequence Models = Recurrent Net – Types – Word Disambiguation – Convolution Net – Basics – Applications			
Unit:6	Contemporary Issues	2 hours	
Ethical Considerations in Machine Learning Applications – Ethics and Challenges of AI and ML as disruptive technology Use cases – Webinars			
		Total Lecture hours	92-- hours

Core/Elective/Supportive	Core		4	2	2	4
Pre-requisite	Soft Skills - I		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> To understand the basics of verbal and non-verbal reasoning, technical programming skills using C++ To acquired knowledge of using soft skills and the interview-based topics in DBMS and Computer Networks. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of Verbal and Non Verbal reasoning.					K2
2	Develop logical skills, analytical skills and apply in software applications					K2
3	Widen the Technical programming skills					K3
4	Improve personal and inter personal skills					K3
5	Understand the basics of Database Management, Operating System and Networking.					K1/K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Verbal Reasoning				18 hours	
General Mental Ability-Coding-Decoding-Blood Relation-Logical Venn Diagram- Mathematical Operations - Arithmetical Reasoning - Truth statement.						
Unit:2	Non-Verbal Reasoning				18 hours	
Series-Choosing the Missing Figure in a Series-Detecting the Incorrect Order-Detecting the Wrong Figure-Analytical Reasoning-Rule Detection Construction of Boxes-Figure Formation and Analysis -Formation of a Figure from Parts Formation of a Figure Fragmentation-Identical Figure-Pattern Rearrangement						
Unit:3	Technical Skills				18 hours	
Concepts of OOPS-Object and Classes - Inheritance – Polymorphism – Data Hiding– Virtual Function - Operator Overloading – Function Overloading						
Unit:4	Interpersonal Skills				18 hours	
Interviews, Group Discussions, Presentation Skills, Conversation: Effective Presentation Strategies Planning-Nuances of Delivery- Controlling Nervousness and Stage Fright-Visual Aids in Presentations- Job Interviews-Media Interviews- Communication-Group Discussions-GD as						

Part of a Selection Process.		
Unit:5	Theoretical Concepts – DBMS	18 hours
Keys-Normalization-RDBMS-Concurrency Control Software Engineering: Models-Design Strategies – Testing-Operating System – Process-Memory Management – Paging-Dead Lock-Virtual Memory- Computer Networks – OSI-TCP/IP-Communication Modes-N/W Devices		
Unit:6	Contemporary Issues	2 hours
Write an assignment on any one of the following:		
1. Patent Drafting and Intellectual Property Rights (IPR)		
2. Plagiarism Checking Tools		
3. A project proposal in any one of your interested domain area		
Total Lecture hours		92 hours

Course code	21CSEGE01	PYTHON PROGRAMMING	L	T	P	C
Core/Elective/Supportive	Elective		4	2	2	4
Pre-requisite	Principles of Programming		Syllabus Version		2020-2021	
Course Objectives:						
<ol style="list-style-type: none"> To understand the basics of Python Data structures and Programming constructs To understand and Apply Python Libraries for Data Science and Machine Learning To understand and apply Exploratory Data Analytics using Data Visualization 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basic programming structure-List, Dictionary, Tuple, String				K1,K2	
2	Understand the Control structures and object oriented concepts				K1,K2	
3	Design and Analyze dataset applying statistical models, visualization and models using various tools				K3,K4	
4	Understand the visualization methods , packages, statistical packages and other packages for building data models				K3,K4, K6	
5	Design data analytic model using the packages in python and provide inferences for multi-disciplinary domains				K3,K4	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction				18-- hours	
Introduction to Python: Python Introduction, History of Python, Python features , Python interpreter, Overview of programming in Python, Basic data types, Program input and Program output, Variables and assignment. Global and local variables. Python - Basic Operators: Arithmetic Operators, Comparison Operators, Logical (or Relational) Operators, Assignment Operators, Conditional (or ternary) Operators. Modules: Importing module, Math module Random module, Packages, Composition.						
Unit:2	Advanced Data Types				18-- hours	
Python Strings and string manipulation [Assigning values in strings, String manipulations, String special operators, String formatting operators, Triple Quotes, Raw String, Unicode String, Build-in-String methods], Python List : Introduction, Accessing values in list, List manipulations, List Operations, Indexing, slicing & matrices. Python Dictionary - Introduction, Accessing values, Properties, Functions in Dictionary. Python Tuples: Introduction, Operation, Accessing, Function and methods in tuples and Data Type Conversion. Python sets						
Unit:3	Control Structures				18-- hours	
Conditional Statement: Branching (if, else-if, nested), Looping: while statement, for statements, Control Statements: break, continue and pass Statements. Python Exception Handling: Try, Catch,						

Finally Functions : Defining a function , Calling a function ,Types of functions , Function Arguments Anonymous functions , Regular expressions : Match function, Search function ,Modifiers. Python OOPs: Class, Object, Inheritance and Constructor.		
Unit:4	Python Libraries for Data Science	18-- hours
Reading and Writing CSV Files in Python using CSV Module, NumPy [Arrays and matrices]: N-dimensional data structure, Creating array, Indexing array, Reshaping, Vectorized operations, Pandas [Data Manipulation]: Create Data Frame, Combining Data Frames, Summarizing, Columns selection, Rows selection (basic) , Rows selection (filtering) , Sorting, Descriptive statistics, Rename values, Dealing with outliers. SciPy Introduction, Basic functions, Special functions(scipy. special), Integration(scipy. integrate), Optimization (scipy. optimize).Tensor Flow: Computation with Tensor Flow, Regression with Tesorflow		
Unit:5	Python Libraries for NLP and Visualization	18-- hours
NLTK,: tokenizing, part-of-speech tagging, stemming, Sentence Segmentation, Methods for cleaning and normalizing text. Textblobn-grams, Parsing, Spelling correction. Visualization libraries : matplotlib, Seabon: Simple Line Plots, Simple Scatter Plots, Density and Contour Plots, Histograms, Customizing Colorbars, Subplots, Text and Annotation, Visualization with Seaborn		
Unit:6	Contemporary Issues	2-- hours
Analyze Data to understand Global Issues on health care, pandemic situations etc..		
	Total Lecture hours	92-- hours
Text Book(s)		
1	Jake VanderPlas, “Python Data Science Handbook” O'Reilly, 1 st Edition, 2017.

Course code	21CSEGE02	DATA MINING	L	T	P	C
Core/Elective/Supportive		Elective	4	4	0	4
Pre-requisite		Basics of Data, Data Structures and Algorithms	Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> To understand the concepts of Data Warehouse architecture and apply for various domains. To understand Data Mining techniques Cluster, Classification and Association Rule Mining. To understand the concepts of Web mining, Text mining and Spatial mining. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand data mining tools and techniques for various domains					K2
2	Apply various data mining, text mining and web mining algorithms for real time applications					K3
3	Analyze unsupervised and supervised algorithms for real world applications					K4
4	Illustrate the mining techniques like association, classification and clustering on datasets					K6
5	Compare various approaches of data mining algorithms					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1		Data Warehousing	12 hours			
Introduction - Definition - Multidimensional data model - OLAP operations - Warehouse schema - Data warehousing architecture - Warehouse Schema - Warehouse server - Meta data - OLAP Engine - Data warehouse backend process - Data Warehouse Technology - Warehousing Software - Cloud data warehousing - Other features. Data Warehousing Case Study: Government, Tourism and Industry						
Unit:2		Data Mining	12 hours			
Introduction – Data as a Subject - Definitions- KDD vs. Data mining- DM techniques-Current Trends in Data Mining. Association Rules: Concepts- Methods to discover Association rules- A priori algorithm – Partition algorithm- Pioneer search algorithm –Dynamic Item set Counting algorithm- FP-tree growth algorithm-Incremental algorithm-Border algorithm-Generalized association rule. Analysis of association rule using orange.						
Unit:3		Clustering Techniques	12 hours			
Data Attribute Types – Data Similarity and Dissimilarity - Clustering paradigms– Partition algorithm-K- Medeoid algorithms – CLARA- CLARANS –Hierarchical DBSCAN-BIRCH-						

CURE-Categorical clustering algorithms-STIRR-ROCK-CACTUS-Other techniques: Implementation of Clustering techniques using orange tool.		
Unit:4	Classification Techniques	12 hours
Introduction – Decision Trees: Tree Construction Principle – Attribute Selection measure – Tree Pruning - Decision Tree construction Algorithm – CART – ID3 - Rainforest - CLOUDS - BOAT, Pruning Technique – Model Evaluation –Cross Validation – Bootstrap – Holdout – Classifier Performance- Boosting – AdaBoost– Bagging		
Unit:5	Web Mining	12 hours
Basic concepts – Web content mining – Web structure mining – Web usage mining – text mining – Text Preprocessing - Text clustering – Spatial mining – Spatial mining tasks – Spatial clustering – Spatial trends – Case Studies: Big Data, Internet of Things.		
Unit:6	Contemporary Issues	2 hours
Write an assignment on any one of the following: 1. Feature Engineering 2. Aspects of data ethics in a changing world.		
	Total Lecture hours	62 hours
Text Book(s)

Course code	21CSEGE03	EVOLUTIONARY COMPUTING	L	T	P	C
Core/Elective/Supportive	Core		4	4	0	4
Pre-requisite	Knowledge on algorithms and design strategies	Syllabus Version	2020-2021			
Course Objectives:						
The main objectives of the course are						
<ol style="list-style-type: none"> 1. To understand the evolutionary and heuristic technique and value representation. 2. To understand Optimization Algorithm, Genetic Algorithm and Neural Networks. 3. To understand multi-objective optimization and applications of heuristic technique. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
CO1	Develop knowledge of evolutionary computation methodologies in the context of modern heuristic methods				K2	
CO2	Gain experience in matching various evolutionary computation methods and algorithms for particular classes of problems				K3	
CO3	Understand Single objective and Multi-objective optimization problems				K2	
CO4	Solve optimization problems using suitable algorithms				K5	
CO5	Develop evolutionary algorithms for real-world applications				K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction to Evolutionary Computing				12 hours	
Introduction to evolutionary and heuristic techniques - Principles and Historical Perspectives; Application potential in optimization, dimensionality reduction, data mining and analytics, Genetic Algorithms, Evolutionary Strategies, Evolutionary Programming						
Unit:2	Optimization Algorithms				12 hours	
Introduction to Representations, Binary Strings, Real-Valued Vectors, Various Selection Strategies Introduction to Search Operators, Crossover and Mutation, Ant Colony Optimization, Pheromone mediated search and Exploration and Exploitation strategies, Particle swarm optimization basic PSO strategies and variants, different neighborhood topologies						
Unit:3	Artificial Neural Networks				12 hours	
Fundamentals of Artificial neural networks – Architecture – Learning Paradigms – Activation Functions - Multi-Objective optimization problem- principles of Multi-objective optimization– Dominance and pareto-optimality - Pareto Front and Non-dominated Solutions – Classical methods						
Unit:4	Fuzzy Logic				12 hours	
Fuzzy logic - Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions - Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems – Fuzzy Expert Systems – Fuzzy Decision Making - Adaptive Neuro-Fuzzy Inference Systems.						

Unit:5	Optimization in Data Analytics	12 hours
Applications of evolutionary & Heuristic techniques in large scale Optimization, Combinatorial & Function optimization - NSGA, Applications to large scale clustering classification, rule mining and Data driven Modeling, Variable Selection and Informative Data reduction and parameter optimization in predictive data analytics		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		62 hours

Course code	21CSEGE04	TEXT ANALYTICS	L	T	P	C
Core/Elective/Supportive	Elective		4	3	1	4
Pre-requisite	Knowledge on Txt data, NLP		Syllabus Version		2020-2021	
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the text mining and NLP techniques 2. To understand and apply probabilistic models, clustering and classification for text analytics. 3. To understand and apply text analytics approaches in different domains 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the text mining and text pre-processing techniques				K1, K2	
2	Understand the concepts of text mining in information retrieval and extraction				K1,K2	
3	Apply the probabilistic models, clustering and classification for text analytics				K3	
4	To apply the text analytics approaches in different domains				K3-K5	
5	Design a text analytic framework to analyze text data for domain specific applications				K4-K5 K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create						
Unit:1	Text Mining				18-- hours	
Text Mining - Definition - General Architecture – Core Text mining Operations. Nature of unstructured and semi-structured text, Collecting documents NLP : Text pre-processing- Sentence Segmentation tokenization - lemmatization - stemming - Parsing text - keywords,- POS, Bag of Words Model, n-grams, chunking and Named Entity Recognition (NER) Corpus - sentence boundary determination - Textual information to numerical vectors -vector generation for prediction- document standardization and Representation – Inverted Index-term document matrix (TDM)-TDM Frequency						
Unit:2	Information retrieval and Extraction				18-- hours	
Information retrieval- keyword search - Vector space scoring, Models - web- based document search-matching-inverted lists. Information extraction-Architecture - Co-reference - Named Entity and Relation Extraction-Template filling and database construction –Applications. Inductive - Unsupervised Algorithms for Information Extraction. Text Summarization Techniques -Topic Representation -Influence of Context -Indicator representations						
Unit:3	Text Categorization				18-- hours	
Text Categorization – Definition – knowledge engineeringText ClassificationFeature Selection for Text Classification, Gini Index, Information Gain .Evaluating model : confusion matrix, class specific measure Classification models : Decision Tree Classifiers -Rule- based Classifiers - Naive						

Bayes Classifiers - Linear Classifiers-Classification of Linked and Web Data –Text Clustering – Definition- Feature Selection and Transformation Methods for Text Clustering –Distance and similarities-Hierarchical cluster –K-means -Semi- Supervised Clustering -Transfer LearningPattern Extraction - Apriori Algorithm – FP Tree algorithm - Results summaries		
Unit:4	Probabilistic Models for Text Mining	18-- hours
Probabilistic Models: Introduction, Mixture Models, Stochastic Processes in Bayesian Nonparametric Models, Graphical Models, Probabilistic Models with Constraints, Parallel Learning Algorithms. Probabilistic Models for Information Extraction -Hidden Markov Models - Stochastic Context-Free Grammars - Maximal Entropy Modeling -Maximal Entropy Markov Models - Conditional Random Fields		
Unit:5	Text Analytics Use Cases	18-- hours
Text Analytics in Social Media, Modeling text sentiments, Spam Detection, Mining Text Streams, Opinion Mining and Sentiment Analysis, Text Visualization Approaches -Architectural Considerations –Common Visualization Approaches for text mining. Case study :		
Unit:6	Contemporary Issues	2-- hours
Challenges of text analytics approaches for regional specific languages		
Total Lecture hours		92-- hours

Course code	21CSEGE05	INTERNET OF THINGS	L	T	P	C	
Core/Elective/Supportive		Elective	4	3	1	4	
Pre-requisite		Basic knowledge of hardware, Programming in C	Syllabus Version		2020- 2021		
Course Objectives:							
The main objectives of this course are:							
<ol style="list-style-type: none"> 1. To gain insight about the architecture and enabling technologies of Internet of Things 2. To understand Arduino micro controller and IDE 3. To develop simple IoT Applications for different domains 							
Expected Course Outcomes:							
On the successful completion of the course, student will be able to:							
CO1	To learn the importance of smart objects and smart environment					K1	
CO2	To understand and use the microcontroller and various sensors					K2	
CO3	To create programs using Arduino IDE and extract data					K3	
CO4	To perform WiFi data communications, remote data storage in cloud, and handle the data using web applications					K3, K4	
CO5	To identify potential problems and develop solutions using IOT					K5, K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create							
Unit:1		Introduction to IOT				10 hours	
Introduction to IOT - Enabling technologies of IOT - AI and Machine Learning - Physical and logical design of IoT - IOT Reference Architecture - IOT Functional Architecture - IoT levels and deployment templates – Application domains of IoT: Home automation – Cities – Environment – Energy – Industry – Agriculture – Transportation - Health care & Lifestyle.							
Unit:2		Basic Electronics for IoT & Arduino IDE				20 hours	
Understanding basic electronic components and power elements Electric Charge, Resistance, Current and Voltage – Resistors, Capacitors, Diodes, LED, Potentiometer, circuit boards - Analog and digital circuits – Microcontrollers – Electronic Signals – A/D and D/A Conversion – Pulse Width Modulation Arduino IDE: Installation and Set-up - Programming Fundamentals with C using Arduino IDE Program Structure in C - Basic Syntax - Data Types / Variables / Constants - Operators, Conditional Statements and Loops - Using Arduino C Library functions for Serial, delay and other invoking functions.							
Unit:3		Arduino Microcontroller and sensors				20 hours	
Working with Arduino: LED and Switch - Data acquisition with IOT Devices - Understanding Sensors and Devices - Understanding the Inputs from Sensors - Working with Temperature Sensors -Working with Ultrasound Sensor -Working with humidity sensor - Working with Motion Sensor - Working with IR Sensor - Working with Proximity Sensor - Working with Accelerometer and vibration sensor.							
Unit:4		Medical Sensors and Actuators				20 hours	

Understanding Medical Sensors: Flow Sensor - Optical Sensor - Body Temperature Sensor - Blood Pressure Sensor - Airflow sensor (breathing) - Patient position sensor (accelerometer) - Pulse and oxygen in blood sensor (SPO2) - Galvanic skin response (GSR - sweating) sensor. Understanding the Outputs through Actuators - Activating LED Lights - Activating Relays - Activating Buzzer - Running DC Motors - Running Stepper Motors and Servo Motors.		
Unit:5	Data Communication from IOT devices	20 hours
Building and Using Communication Devices to transfer data from IOT Devices - Understanding the Communication Principles to Transfer the data from IOT Devices; Using WIFI to Transfer the data from IOT Sensor; Programming Fundamentals with Web Applications for handling Data Communication from IOT Device; Remote Communication to cloud/external application .		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars

Course code	21CSEGE06	SENTIMENT ANALYSIS	L	T	P	C
Core/Elective/Supportive	Elective		4	4	0	4
Pre-requisite	Basics of data and data classification methods		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to: To understand representation and handling of opinions by people in different ways. To analyze different challenges in sentiment analysis To understand aspect oriented sentiment analysis classification To analyze fake opinion detection and intention classification To understand machine learning techniques for sentiment analysis at different levels						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Introduction to sentiment analysis and its applications					K1,K2
2	Understand Sentiment analysis using supervised and unsupervised learning					K2
3	Discuss the challenges in sentiment analysis classification					K4
4	Create different types of opinion summary from the given data sources					K1,K3
5	Understand the aspect oriented sentiment analysis					K3,K4
6	Identifying opinion quality, author intention and fake opinions					K1,K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction to Sentiment Analysis					10-- hours
Introduction: Sentiment Analysis Applications - Sentiment Analysis Research - Sentiment Analysis as Mini NLP. The Problem of Sentiment Analysis: Definition of Opinion - Definition of Opinion Summary - Affect, Emotion, and Mood - Different Types of Opinions - Author and Reader Standpoint. Document Sentiment Classification: Supervised Sentiment Classification - Unsupervised Sentiment Classification - Sentiment Rating Prediction - Cross-Domain Sentiment Classification - Cross-Language Sentiment Classification - Emotion Classification of Documents.						
Unit:2	Subjectivity Classification and Challenges					10-- hours
Sentence Subjectivity and Sentiment Classification: Subjectivity - Sentence Subjectivity Classification - Sentence Sentiment Classification - Dealing with Conditional Sentences - Dealing with Sarcastic Sentences - Cross-Language Subjectivity and Sentiment Classification - Using Discourse Information for Sentiment Classification - Emotion Classification of Sentences.						
Unit:3	Aspect Oriented Classification					14-- hours
Aspect Sentiment Classification: - Rules of Sentiment Composition - Negation and Sentiment - Modality and Sentiment - Coordinating Conjunction But - Sentiment Words in Non-opinion Contexts - Rule Representation - Word Sense Disambiguation and Co reference Resolution. Aspect and Entity Extraction: Frequency-Based Aspect Extraction - Exploiting Syntactic Relations - Using Supervised Learning - Mapping Implicit Aspects - Grouping Aspects into Categories - Exploiting Topic Models - Entity Extraction and Resolution - Opinion Holder and Time Extraction.						

Unit:4	Sentiment Lexicon generation and Summarization	14-- hours
Sentiment Lexicon Generation: Dictionary-Based Approach - Corpus-Based Approach - Desirable and Undesirable Facts. Analysis of Comparative Opinions: Problem Definition - Identify Comparative Sentences - Identifying the Preferred Entity Set - Special Types of Comparison - Entity and Aspect Extraction. Opinion Summarization and Search: Aspect-Based Opinion Summarization - Enhancements to Aspect-Based Summary - Contrastive View Summarization - Traditional Summarization - Summarization of Comparative Opinions - Opinion Search - Existing Opinion Retrieval Techniques. Mining Intentions: Problem of Intention Mining - Intention Classification - Fine-Grained Mining of Intentions.		
Unit:5	Identifying intention, fake and quality of opinion	12-- hours
Detecting Fake or Deceptive Opinions: Different Types of Spam - Supervised Fake Review Detection - Supervised Yelp Data Experiment - Automated Discovery of Abnormal Patterns - Model-Based Behavioral Analysis - Group Spam Detection - Identifying Reviewers with Multiple User ids - Exploiting Business in Reviews - Some Future Research Directions. Quality of Reviews: Quality Prediction as a Regression Problem - Other Methods - Some New Frontiers.		
Unit:6	Contemporary Issues	2-- hours
Expert lectures, online seminars - webinars		
	Total Lecture hours	62-- hours

Course code	21CSEGC07	SOCIAL MEDIA MINING	L	T	P	C
Core/Elective/Supportive	Elective		4	-	-	4
Pre-requisite	Knowledge on Complex data structures, algorithm and web		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand how accurately analyze voluminous complex data set in social media and other sources 2. To understand the models and algorithms to process large data sets 3. To understand social behavior and recommendation challenges and methodologies 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the concepts of Graph Models, social communities				K1, K2	
2	Understand the network models and measures to evaluate information				K3	
3	Understand and apply algorithms to model data using graph and network structures and recommendations				K2,K5	
4	Brief on algorithms on social data diffusion and apply for various domains				K2,K3, K4	
5	Distinguish and Suggest the appropriate algorithms for domain specific applications for data modelling and information diffusion, Evaluate the algorithms for metrics				K4,K5, K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Social Media Mining				12-- hours	
Social Media Mining - Introduction – Atoms – Molecules – Interactions – Social Media mining Challenges - Graphs - Basics – Nodes – Edges – Degree of Distribution- Types –Directed – Undirected – Weighted - Graph Connectivity - Tress and Forests – Bipartite graphs – Complete Graphs – Sub graphs – Planar Graphs - Graph Representation - Graph Traversal Algorithms – Shortest path algorithms Dijkstra’s - Spanning tree algorithms – Prims - Bipartite matching - Ford-Fulkerson algorithm						
Unit:2	Network Models				12-- hours	
Network Models – Measures – Node : Eigen Centrality – Page Rank – Group Measures – Between ness centrality - group degree centrality, centrality, and group - Closeness centrality - Node Linking Behavior - Transitivity and reciprocity - Linking Analysis - Cluster coefficient – Jaccard - Case Study : -Modeling small networks with real world model						

Unit:3	Social Media Communities	12-- hours
Social media Communities – Social Communities – Member based Detection – Node degree – Node Similarity – Node reachability - Group Based detection methods - balanced – robust - modular – dense - hierarchical - Spectral Clustering : Balanced Community algorithm Community Evolution - Evaluation.		
Unit:4	Social Network	12-- hours
Social Network – Information Diffusion – Types - herd behavior - information cascades diffusion of innovation – epidemics – Diffusion Models Case Study – Herd Behavior – Information Cascades Methods – Social Similarity – assortativity – Social Forces - Influence homophily – Confounding - Assortativity measures – Influence measures – Predictive Models		
Unit:5	Recommender System	12-- hours
Recommendation Vs Search – Recommendation Challenges – Recommender algorithms - Content-Based Methods- Collaborative Filtering – Memory Based – Model Based – Social Media Recommendation – User friendship – Recommendation Evaluation – Precision – Recall – Behavioral– User Behavior – User – Community behavior – User Entity behavior – Behavioral Analytics - Methodology		
Unit:6	Contemporary Issues	2 hours
1. Social Media Plagiarism – Legal and Ethical issues – Social Media Marketing 2. Lack of focus – Productivity – Relationship – Infidelity – Privacy – Fake Identities 3. Negative impact on Academics – Cyber-crime – Bullying		
Total Lecture hours		62-- hours

Course code	21CSEGE08	PROGRESSIVE WEB APPLICATION DEVELOPMENT		L	T	P	C	
Core/Elective/Supportive	Core	2	0	2	4			
Pre-requisite	HTML, CSS and Object Oriented Programming using JavaScript	Syllabus Version		2020-2021				
Course Objectives:								
The main objectives of this course are to:								
<ol style="list-style-type: none"> To understand the basics of progressive web applications To understand the fundamentals of Angular and develop Angular applications To create, build and deploy progressive web applications using Angular 								
Expected Course Outcomes:								
On the successful completion of the course, student will be able to:								
1	To learn the basics of Angular and Progressive Web Applications						K2	
2	To understand and use Angular forms, dependency injection and routing						K3	
3	To create build and deploy an Angular application using Angular CLI						K6	
4	To explore Service Workers, Data Storage, App Manifest and Notifications in Progressive Web Applications						K3	
5	To build and deploy responsive, fast and reliable Progressive Web Applications using Angular						K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create								
Unit:1	Building Blocks of Angular					10-- hours		
TypeScript: Built-in Types – Classes – Utilities – Working with Angular CLI – Building Blocks of Angular: Modules – Components – Templates – Metadata – Data Binding – Directives – Services – Dependency Injection								
Unit:2	Data Architecture and Testing in Angular					20-- hours		
Forms in Angular – HTTP - Routing – Data Architecture in Angular: Overview – Observables and RxJS – Redux in Angular – Testing: Testing Tools – End-to-End and Unit Testing – Testing Services and HTTP – Resting Routing to Components – Testing Forms – Testing HTTP requests								
Unit:3	Service Workers in Progressive Web Apps (PWAs)					20-- hours		
Introduction to Progressive Web Apps (PWA) – Current and Future PWA Support – Why Angular – Installing Node and NPM – Service Workers: Understanding Service Worker – Service Worker Life Cycle – Service Worker Functional Events – Cache API – Cache Strategies –								

Runtime Cache in Angular Service Worker		
Unit:4	App Manifest, Notifications and App Shell	20-- hours
Background Sync API – Data Storage: IndexedDB and localForage – App Manifest: The Web App Manifest – Adding Web App Manifest to Home Screen – Notifications: Web Notifications – Push Notifications – App Shell: App Shell Model – Angular App Shell – Further Optimizations – Exploring HTTP/2 and Server Push		
Unit:5	Debugging PWAs and Modern Web APIs	20-- hours
Debugging: NGSW Debug – Web App Manifest – Service Workers – Storage – Cache – Measurement: Audit – Analytics – Safety Service Worker: Fail-safe – Safety Worker – Modern Web APIs: Credential Management – Payment Request – Video and Audio Capturing - Geolocation		
Unit:6	Contemporary Issues	2-- hours
Expert lectures, online seminars - webinars		
Total Lecture hours		92-- hours

Course code	21CSEGE09	SEMANTIC WEB	L	T	P	C
Core/Elective/Supportive		Elective	4	4	0	4
Pre-requisite		Knowledge on Complex data structures, algorithm and web	Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to: <ol style="list-style-type: none"> 1 To understand web 2.0 and web 3.0, the basics of semantic web, features, web standards. 2. To understand and apply knowledge representation methods, standard namespaces, Graph based validation. 3. To analyze and Build Data Integration semantic layer use cases for specific domain and applications. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand Web standards, features, Distributed web data, limits of the web, Need of languages				K1, K2	
2	Understand the concept of Ontology, Knowledge representation, scheme classification				K6	
3	Understand the platform to model, semantic web tools: Triple stores, Development environments, Inference engines				K4	
4	Understand the Semantic web layer for integration, Issues addressed, Representation formats, Mining stack and knowledge graphs.				K2-K4	
5	Analyze various domains, Platform, Mapping of knowledge models, and semantic processing framework of domains of Transportation.				K4-K5 K6	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Introduction to Semantic Web				12-- hours	
Web 2.0 and 3.0 – Meaning of Semantic Data – Distributed web of data – Metadata - Features of semantic web – Data across the web – The basics of semantic web - The Limits of the web – The vision of the semantic web – Semantic web standards – RDF – RDF Scheme (RDFS) – OWL Web Ontology Language – SPARQL Protocol – RDF Query Language (SPARQL) - Need of RDFS – Machine Readability – core elements of RDFS – XML Schema – RDF schema						
Unit:2	Knowledge Representation Methods				12-- hours	
The concept of Ontology - SKOS – Representation of thesauri - Glossaries – Scheme classification – Taxonomies – Controlled Vocabularies - Hierarchical Structure – Formal Representations - Standard Namespaces – JSON based serialization for Linked Data - RDF Triple stores – Turtle – RDFa – Internal Identifiers - URI – RDFS – Classes – Resources – Inferred						

Property Characterization – Literals – Linked Open Data – DBpedia – Querying RDF Graphs – Vocabularies – Graph based validation - Shape constraint Language (SHACL)		
Unit:3	Tools	12-- hours
Triple store: Jena – Allegro Graph – Mulgara – Sesame – Flickurl - Top Braid – Suite – Virtuoso Environment – Content Management System: Falcon – Drupal 7 – Redland – Pellet, Development Environment: Protégé – Ontotext – Open Anzo – RDF Gateway – RDFLib – DartGrid – Zitgist, Inference Engines: SWI-Prolog, Semantic Works –Ontobroker		
Unit:4	Data Integration Semantic Layer	12-- hours
Data Integration issues- Data Interoperability – Data Migration – Data Representation Formats – Data Silos – Linked Data Management – Knowledge Mining Stack – NLP – Named Entity Recognition – Machine Learning – Knowledge Graphs		
Unit:5	Use cases	12-- hours
Use cases Specifications and Discussion: - Transportation: Data Sources – Representation – Linked Data Mapping - Knowledge Modeling – Telecommunication – Knowledge Modeling – Customer Care Support Documents – Internal Reports – Named Entity Recognition – Linked Data Mapping		
Unit:6	Contemporary Issues	2-- hours
Customer provider mismatch – Interlinking domain specific information – Combining different services from different providers – contrast with contemporary web applications		
Markup languages – Object Access Protocols – Service description – Discovery – Integration		
	Total Lecture hours	62-- hours

Course code	21CSEGE10	GRAPH DATABASES	L	T	P	C
Core/Elective/Supportive	Elective		4	2	2	4
Pre-requisite	Basics of Data, Graphs and databases		Syllabus Version		2020-2021	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand Non-relational databases 2. To compare the services and activities of NoSQL databases 3. To apply and understand graph oriented database features. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand databases, transaction problem, graph theory, new generation databases, non-standardized query language.					K1, K2
2	Understand the database tools, characteristics, different types of non-relational databases.					K4
3	Understand Graph oriented databases, indexes, paths and networking					K4
4	Understand the Graph database platform Neo4j, Components, setup development environment, parameter constraints					K5
5	Implement the query using text mining techniques using the graph database platform Neo4j, Use predictive and descriptive analysis, cypher script.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Introduction to NoSQL Database					18-- hours	
Database – Transactions – Graph – Graph theory – Relational Databases – NoSQL – Store Connected Data – Data models – The Labeled property graph model - Data Structure – Unstructured Data – Development model – New Generation Databases – Non-relational – Distributed – Open source – Benefits – High Performance - Schema less – Horizontal Scalable – Issues - Non-Standardized query language – Transaction problem – Integrity - Querying graph – Cypher.						
Unit:2						
NoSQL Database Tools					18-- hours	
Predictive Analysis – Transactional Systems — Characteristics – CAP – Consistency – Availability – Partition Tolerance – Use Base Property – Types of non-relational database – Key –value storage – column oriented databases – Document – oriented database – Graph Oriented Database						
Tools: Column Oriented Databases: Amazon DynamoDB, Cassandra, Voldemort – RAMCloud – Flare, Document Oriented Databases: CouchDB – MongoDB – Cloudkit – XML Databases – DB2 pureXML, Graph Oriented Databases: Neo4j – Hyperbase-DB - InfoGrid						
Characteristic Comparison: Performance – Scalability – Flexibility – Complexity – Functionality						

Unit:3	Connected Data	18-- hours	
Graph Oriented Database – Indexes – Properties - Graph – Relationships – Nodes - Directed Graphs – Non Directed Graphs – Traversal – Paths – Algorithm - Network representation – Implementation – Neo4J – Hyperbase-DB – InfoGrid – The Graph Store.			
Unit:4	Graph Oriented Database Platform: Neo4j	18-- hours	
Graph Databases – Model relational data – Property graph model – Neo4j Graph Platform – Components – Features – Benefits of Neo4j – Setup Development Environment – Neo4j Sandbox – Neo4j Desktop – Cypher – Match – Graph node retrieval – Graph relations retrieval – Graph properties retrieval – Nodes – Relationships – Merge data into graph – Parameter constraints – Monitor query execution – Indexes – Relational Data.			
Unit:5	Use cases	18-- hours	
Implement Graph Database with Neo4j			
NoSQL Database – Neo4j – Queries – Text Mining techniques – Descriptive and Predictive Analysis – University – Journal Conference Publications – Capture data – Design Graph Database – Populate – Obtain Machine Learning Groups – Journal Article Numbers – Publishes Articles – Cypher script – Graph Data.			
Unit:6	Contemporary Issues	2-- hours	
Maintaining consistency of data, modelling highly interconnected data, Performance issues, Indexing, Inter-regional communications, Connection between different schemas.			
Total Lecture hours		92-- hours

Course code	21CSEGE11	HEALTH CARE DATA ANALYTICS	L	T	P	C
Core/Elective/Supportive	Elective		4	2	2	4
Pre-requisite	Basics on Statistics and Linear Algebra		Syllabus Version	2020-2021		
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the Process ,Concepts and Procedures in Health Care Data Digital Systems 2. Understand Data standards used in Health Care Domain 3. Design Integrated Health Care Data Models for Data Analytics 4. Understand and Remember the Ethics of Managing and Analyzing Health Care Data 						
Expected Course Outcomes:						
CO1	Understand the Process and Data Functionalities of Health Care Data			K1, K2		
CO2	Understand the various Data Sources, diagnostic standards and Components of Data Analytics			K2, K1		
CO3	Understand and design Integrated Data Model for analytics			K2, K5		
CO4	Apply ETL for data analysis and create dashboards			K3, K4		
CO5	Create and evaluate prediction models in healthcare applications for preventive care and personalized medicines			K6		
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Health Care Systems			18-- hours		
Introduction :Health Care Entities – Electronic Health Care Records – Clinical Data - Health Care Big Data Sources– Patient Data – Administrative Data – Genomics Data – Imaging Data- Insurance Data – Diagnostic Data – Clinical Data— Social Media – Survey Data – Family Data – Data Quality – Data Ethics – Data Integration Challenges						
Unit:2	Data Models and Data Standards			18-- hours		
Data Models : Relational Models – Hierarchical Models — Data warehousing Models – Star Schema – Normalized Data and Deformed – Health Care Knowledge Representation Ontologies – Diagnosis Standards – ICD 9/10 - DSMI – DSM II –Drug Standards SNOWMED – LOINC – Laboratory Standards – Data Challenges in Data Mapping -Data Standards as Linked Data						
Unit:3	Big Data and Data Analytics			18-- hours		
Data Analytics: Data Cleaning and Pre-Processing – Data Processing and Modeling - Classification – Clustering – Dimensionality Reduction - Prediction Machine Learning – Microsoft Azure Cloud -Data Visualizing – Histogram – Boxplot- Scatter Plot – Bar – Pie – Mosaic Plot – Trends Lines – Heat Maps – Density Plots - Dashboard – Creation - Presentation						
Unit:4	Advanced Health Care Analytics			18-- hours		
Genomics Data Analysis – Microarray Data – Sequence Data – Research Survey Analysis – Text Mining – Tele Health – Virtual HealthCare Assistance -						

Unit:5	Health Care Use case	18-- hours	
Prediction of Risk of Co morbidity Individuals – Outbreak – Epidemics - Personalized Medical Care – Pharmaceuticals and Patient Data Integration – Clinical Data			
Unit:6	Contemporary Issues	2 hours	
Challenges and Gap – Health Care Data Integration – Analysis of Developing Countries			
		Total Lecture hours	62-- hours
